The Seed Business — A Matter of Confidence.

THERE is perhaps no other business where confidence plays so important a part as it does in the seed business.

Confidence starts with the dealer who purchases his seeds from the grower, in whom he must have complete faith as to honesty and integrity, and from the dealer the seed passes on to the gardener or farmer, who must also have faith in the dealer from whom he buys.

JOHNSON'S SEED STORE has and always will exert every effort to warrant the confidence our customers have displayed in us by affiliating ourselves only with growers whose reputation is unmarred by carelessness. All of this confidence is necessary because it is impossible for anyone to determine the vitality or productivity of a seed by looking at it.

It naturally follows, therefore, that the uncertainty of what a certain seed will produce is materially eliminated by placing your orders where your confidence is cherished above all else.

Johnson's High Grade Lawn Seed

Smooth, Firm, Evergreen Lawns from Johnson's Lawn Grass Mixtures

ABOUT LAWNS AND LAWN GRASS SEED

Formation of Lawns from Seed

There is nothing more attractive than a well-kept lawn.

The ground should be thoroughly drained and well prepared. The soil ought not to be too rich, as a rapid growth is not wanted in the grasses of a lawn; but the surface should be as much alike in quality as possible and thoroughly pulverized. After sowing, the ground should be rolled if possible, in order to press the seed firmly into the soil, and ten days or so thereafter a light application of Johnson's Lawn Fertilizers will serve to stimulate the growth of the young grasses. The proper time to sow grass seed depends, of course, upon latitude. In the central and eastern states from March 15th to the middle of May is the best time; but in favorable seasons the sowing may be done up to July 1st. Seed may also be sown in the fall, from the latter part of August to the end of October or later, depending upon the weather. The sowing should be done when the ground is moist, or before an expected rain, and a subsequent rolling is always advisable. As to weeds in newly-made lawns, it may not be generally known that many weed seeds actually lie dormant in the ground for six or seven years and will germinate and make their appearance when the soil is turned up.

Johnson's "Reliable" Mixture

An Ideal Lawn Seed Mixture—Cleanest, Best, Cheapest

THE BEST FOR GENERAL PURPOSES

Our "Reliable" Lawn Grass Seed is the cleanest, heaviest, cheapest and best, because it is made up of Extra Recleaned Seeds of the finest varieties of grasses, each of which has its season of beauty and the result is the production of a sod that is always evergreen and velvety. Many of the finest lawns of our city are seeded with Johnson's Reliable Lawn Grass, the preparation of which is a specialty with us. Less seed of Johnson's Reliable is required than of any other brand. Hence it is economical in the end. One pound will sow 400 square feet. Lb., 60 cts.; 5 lbs., \$2.75; 10 lbs., \$5.00; 20 lbs., (1 bu.), \$9.00.

Johnson's Early Wonder Beet

An early variety, similar in type to Crosby's Egyptian. Globe shaped and very uniform in size, skin smooth, and flesh a deep blood red and extremely tender. It is admirably suited to the home garden and also on account of its earliness and superfine quality, valuable to the Market Gardener. Good for spring or late summer sowing. Long Season Beet

Tender and Delicious the Whole Season Long

NOVELTIES AND SPECIALTIES—Continued

Johnson's Earliest Snowstorm Cauliflower

Snowstorm is the very best and earliest strain of Cauliflower on the market for forcing. It is a dwarf variety, with short outer leaves, and can be planted close, 2 feet apart each way. It always makes a fine, large and exceedingly beautiful snowy white head, much earlier than any other variety. Pkt., 25 cts.; $\frac{1}{4}$ oz., \$1.25; $\frac{1}{2}$ oz., \$2.00; oz., \$3.50, postpaid.

Johnson's New Melting Orange Carrot

Johnson's New Melting Orange Carrot

A very fine variety for table use. The carrots are very tender, of mild pleasant flavor, and without any hard core as in some varieties. The shape is ideal for a table carrot, being practically the same size from crown to bottom. The roots grow to medium size, are very smooth, and of a deep orange-red color all through. The carrots grow rapidly and are excellent for use when either young or full grown. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 60 cts.; lb., \$2.00, postpaid.

Cleveland Market Broccoli

(True Italian Strain)

The sprouting Broccoli furnish delicious boiling greens during summer, autumn and early winter. The very choice variety which we offer has green tender shoots and leaves produced in the greatest abundance. Cultivation is the same as that for cabbage, sowing from March to early July, transplanting later, 2 feet or more apart. Broccoli is preferred by many to cauliflower. Pkt., 25 cts.; $\frac{1}{4}$ oz., 30 cts.; $\frac{1}{2}$ oz., 55 cts.; oz., \$1.00, postpaid.

Mammoth New York Swiss Chard

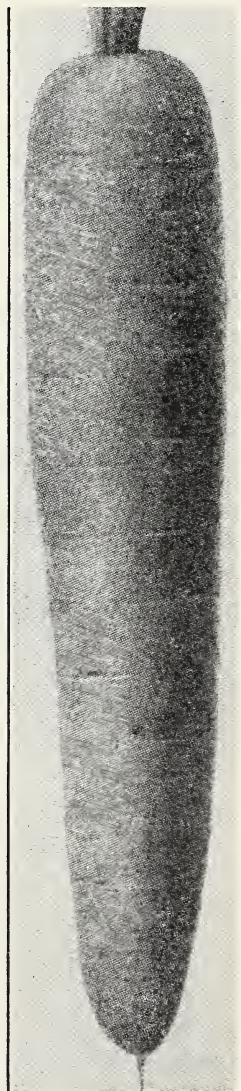

This is a new and quite distinct sort, medium green in color, and of large size. The leaves are smooth, and the stalks are solid, thick, and of a pearly whiteness. The remarkable feature about Mammoth New York, however, is its superior flavor; careful breeding has entirely eliminated the earthy flavor which many Chards possess. We anticipate a large demand for this variety. Pkt., 20 cts.; $\frac{1}{2}$ oz., 55 cts.; oz., 95 cts.; $\frac{1}{4}$ lb., \$2.50, postpaid.

Helpful Advice Without Charge

Johnson's service does not end when the seeds are sold. Not only have we made this book a helpful guide to planting and cultivation, but should our customers require any special help on seeds, plants and bulbs, our staff of capable, practical experts is available. No charge is made. You are heartily invited to take advantage of this service, and we guarantee prompt and courteous attention.

Johnson's New Extra Early Coreless Carrot

A very fine variety for table use. The carrots are very tender, of mild pleasant flavor, and without any hard core as in some varieties. The shape is ideal for a table carrot, being practically the same size from crown to bottom. The roots grow to a medium size, are very smooth, and of a deep orange-red color all through. The carrots grow rapidly and are excellent for use when either young or full grown. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts., postpaid.

Johnson's New Extra
Early Coreless Carrot

Specialties in Sweet Corn

Johnson's Verifirst Sweet Corn

This new corn is so early that in a comparative test beside ten of the earliest sorts on the market, we found none to come within five days of being ready so soon for table use. It is a real acquisition for those who wish the earliest maturing sort either for home use or the market. Nothing that we know of can approach it for earliness, hardness and delicious flavor. Pkt., 15 cts.; $\frac{1}{2}$ lb., 30 cts.; lb., 50 cts.; 2 lbs., 85 cts.; 5 lbs., \$2.00; 10 lbs., \$3.50, prepaid.

Johnson's Golden Wedding Sweet Corn

A fine new sort, yielding two, and sometimes three, ears to each plant. It is a yellow variety, like Golden Bantam, but the ears are much larger and have 12 or more rows instead of the 8 rows of Golden Bantam. For sweetness and general refinement of flavor we consider it superior to the old Golden Bantam, and it is being served by many leading New York hotels. $\frac{1}{2}$ lb., 30 cts.; lb., 55 cts.; 2 lbs., \$1.00; 5 lbs., \$2.25, prepaid.

Early Dighton Sweet Corn

This new variety is the earliest of all white sweet corns, even earlier than the Extra-Early Adams. The stalks are 3 to 4 feet high, with the ear set low down on the stalk. Ears are 6 to 7 inches in length and most all carry 8 rows of grains. The quality is very good for so early a sort. Pkt., 10 cts.; $\frac{1}{2}$ lb., 25 cts.; lb., 35 cts.; 2 lbs., 60 cts.; 10 lbs., \$2.75, prepaid.

Whipple's Large Early Sweet Corn

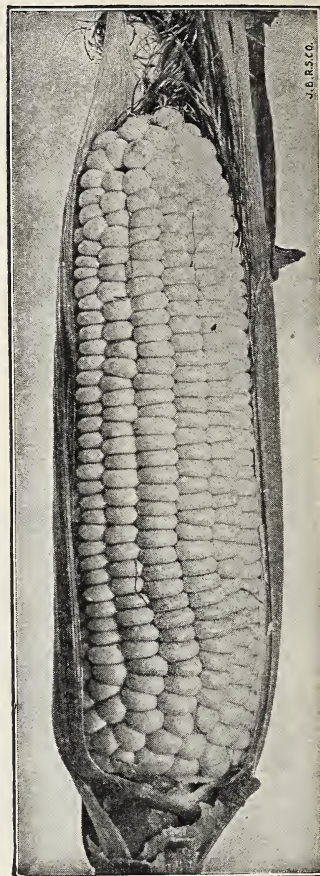

A Splendid Sort to Follow Johnson's Verifirst

This is a wonderful new early sweet corn. It matures as early as the small-eared early kinds and has ears that look like Evergreen.

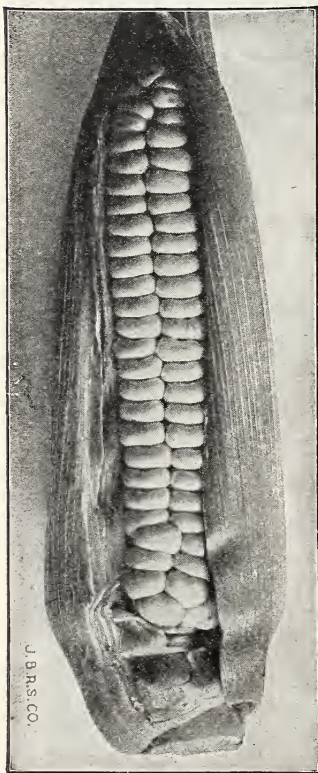

They are tender, very sweet and delicious. No other early white corn is of such fine quality. The ears are 7 to 8 inches long and very large around, as they have 16 to 20 rows of good sized kernels. Each ear is filled right to the tip. The ears look like Evergreen of a fine strain, yet they mature two to three weeks earlier. This corn matures only a few days later than Johnson's Verifirst. It will be like having Evergreen corn two weeks earlier than other people, and getting nearly twice as many dozen per acre. Pkt., 15 cts.; $\frac{1}{2}$ lb., 30 cts.; lb., 55 cts.; 2 lbs., \$1.00; 10 lbs., \$4.50, prepaid.

Johnson's New Golden Standard Sweet Corn

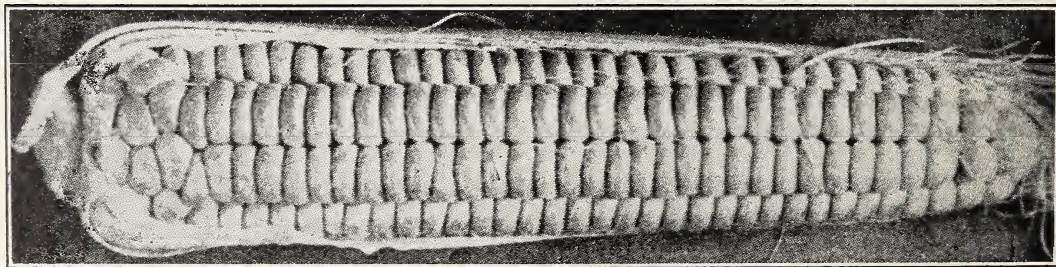

This splendid new sweet corn is almost identical with De Lue's Golden Giant, but we believe it is slightly larger and fully equal in quality. It is a cross between Golden Bantam and a large white sort, thus combining the rich buttery flavor of Bantam with the size and tenderness of the longer white parents. Planted in spring at same time as Bantam, the new Golden Standard will just follow the former in being ready for table use. For later successions we recommend using the New Golden Standard altogether on account of its larger size. Pkt., 15 cts.; $\frac{1}{2}$ lb., 30 cts.; lb., 50 cts.; 2 lbs., 85 cts.; 10 lbs., \$4.00, prepaid.

Vegetable Specialties

New Golden Plume Celery

It is the consensus of opinion of government and state authorities as well as the practical market gardeners and celery growers of the country, that this variety of Celery is the best golden self-blanching type yet produced here or abroad. It matures two to three weeks earlier and blanches in half the time of the old self-blanching strains. It has a large, generous, fast-growing heart, is crisp, free from stringiness and attractive in appearance, has a broad, well formed stalk with probably a larger percentage of edible celery than any other variety. Our seed is produced from originator's stock. Pkt., 25 cts.; $\frac{1}{4}$ oz., 60 cts.; $\frac{1}{2}$ oz., \$1.00; oz., \$1.75; $\frac{1}{4}$ lb., \$6.50, postpaid.

New Golden Plume or Wonderful Celery

GARDEN GUIDE (Amateur Gardener's Handbook). This gem covers every step from the preparation of the soil to the preservation of the harvest and we are glad to recommend it to every person who has a lawn to care for, a garden to plant, fruits and ornamentals to prune. Whoever enjoys flowers and wishes to keep them free from insects will appreciate its helpful suggestions. Over 275 illustrations appear on its 384 pages, Postpaid, cloth, \$1.65.

Quality First

A garden or farm is planted for results. We are always striving to better our stocks, and in filling your orders we are always alert to the necessity of supplying seeds of the best possible quality. We want you to know that we value your confidence in our ability to give you the best of everything in our line.

JOHNSON'S SEED STORE.

Johnson's First in the Market Cucumber

For over thirty years we have been selecting and breeding up this type of extra early White Spine—the object being to get perfect fruits of "slicing" size into the market at earliest possible date. The color is an attractive dark green and the table quality is unsurpassed. The vines are of vigorous growth and produce abundantly, making them most profitable, both for the earliest "slicers" and when planted in June or July for pickles. When ready for slicing they run from 6 to 8 inches long, very straight and full and tapering abruptly at both ends. This sort is not only very desirable for market gardeners in the north but is much in favor in more southern localities for early shipment to northern markets.

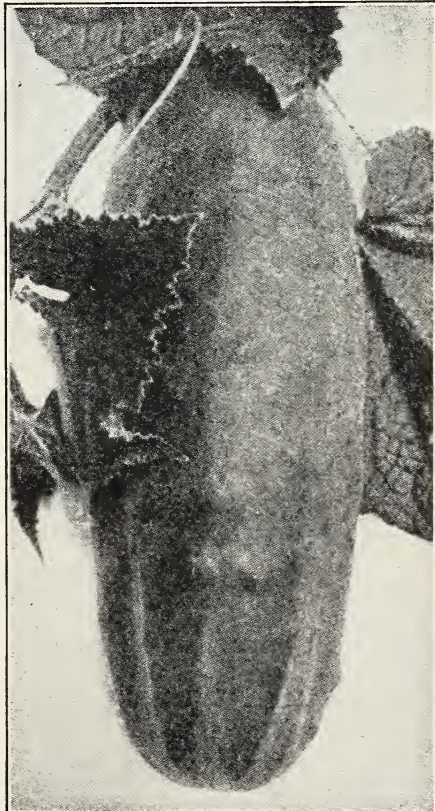

We take special pride in this variety and can highly recommend it. Pkt., 10 cts.; oz., 25 cts.; $\frac{1}{4}$ lb., 75 cts.; lb., \$2.50, postpaid.

Johnson's Selected Davis Perfect Cucumber

We have spent many years in working up a very fine strain of Davis Perfect in which fine length, slimness, beautiful dark green color, transparent-like flesh with deliciously cool refreshing flavor and enjoyable crispness are distinguishing features and qualities of this, the most popular of the extra long white spine cucumbers. For indoor and outdoor planting it is most popular. Its extremely vigorous growth makes it the best blight resister of the long sorts. Pkt., 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 50 cts.; lb., \$1.50, postpaid.

New York or Wonderful Lettuce

Possibly the largest Lettuce in cultivation. It is so distinct that, with its crisply curled leaves, very dark color, and remarkable size, it may puzzle even the experienced grower if unacquainted with it. New York is a sure-heading variety, suitable both for spring and late summer planting; the big, compact, white heads are of the best possible quality. The heart is large, white, crisp and very compact. New York or Wonderful needs 50 per cent more room in which to grow than varieties of the usual type. Pkt., 10 cts.; oz., 35 cts.; $\frac{1}{4}$ lb., 90 cts.; lb., \$3.00, postpaid.

Johnson's New Extra Early Eight Weeks Peas

Some people plant this variety exclusively, making successive plantings as the season advances, as they have found that it will give a larger yield on a comparatively small space of ground than any other sort. The vines grow 10 to 15 inches high, depending on soil and season.

Early Eight Weeks is a vigorous grower, bearing loads of good sized pods well filled with peas that surpass in quality any of the older extra early varieties. Pkt., 15 cts.; ½ lb., 40 cts.; lb., 65 cts.; 2 lbs., \$1.10; 5 lbs., \$2.50; 10 lbs., \$4.50, postpaid.

BEETS FOR TABLE USE

If wanted very early, sow in hotbeds and transplant; but for main crop sow in the spring, as soon as the ground becomes fit to work, in drills $1\frac{1}{2}$ feet apart, $\frac{1}{2}$ inch deep. For winter use, the turnip varieties may be sown as late as June and the seed covered 2 inches. When the plants are 3 to 4 inches in height, thin out so that they stand 3 to 4 inches apart. Before freezing weather sets in the roots may be stored in cellars or pits, same as potatoes. Dry earth thrown over them before the straw is put on insures their keeping over winter. Do not bruise them in handling.

One ounce of seed will sow 50 feet of drill; 5 to 6 pounds to the acre.

Carrots

Sow in early spring in drills 15 to 18 inches apart, finally thinning the plants to 3 to 4 inches apart. If sown early on moist soil, a half-inch is deep enough to cover the seed. The seed is slow to germinate. Keep clean by frequent hoeing and weeding. If neglected, the young plants are easily smothered, and the crop lost.

CAULIFLOWER

(Cavolfiore—Kalafiori)

One ounce will produce 1000 plants

Cauliflower succeeds well in any soil where cabbage will grow. It delights in a rich soil and abundance of water. By sowing the early varieties in a hotbed in February or March, fine heads can be obtained in May or June. For a later supply, sow seed in a prepared bed in May, choosing a cool, moist place. When large enough, transplant, making the rows about 2½ feet apart and 18 inches between the plants. Transplanting should be done in moist weather.

CUCUMBERS—Cont.

Johnson's Greenhouse Forcer

Introduced by Johnson in 1920.

A wonderfully choice strain which has been selected and developed for many years especially for greenhouse forcing on a large scale. The fruits are remarkably uniform in shape and size, averaging about 14 inches in length. The color is a beautiful deep green, which is held for several days, almost spineless, and is admirably adapted for packing in flats and baskets for the highest class of trade. Our seed is strictly greenhouse grown by the originator. Pkt., 20 cts.; $\frac{1}{2}$ oz., 50 cts.; oz., 85 cts.; $\frac{1}{4}$ lb., \$2.50; $\frac{1}{2}$ lb., \$4.00; lb., \$7.00, postpaid.

Johnson's Greenhouse Forcer

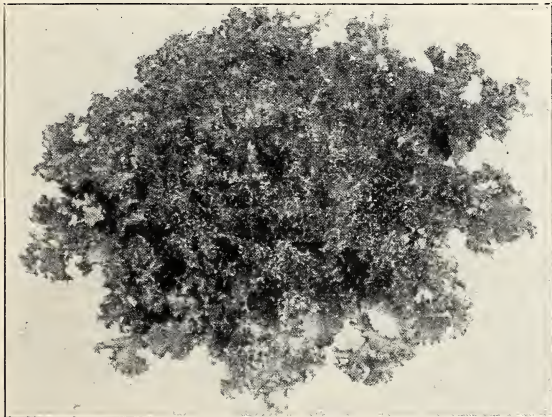

VICKERY'S FORCING. This is undoubtedly one of the finest cucumbers for the greenhouse. It is of the White Spine type, about 9 inches long and is a much deeper green. Vickery's Forcing is surprisingly productive and will net a much larger return than other sorts because it will cut so many more baskets of cukes. These facts are causing greatly increased demands for seed each season. Pkt., 15 cts.; oz., 45 cts.; $\frac{1}{4}$ lb., \$1.50; lb., \$5.50, postpaid.

Chervil

One ounce will sow about 100 feet of drill.

Can also be sown in August or September; thin out to six inches in row, and rows fifteen inches apart.

Lettuce

Culture. For early spring use, sow in a seedbed in September or October, and protect through the winter in coldframes, or in the South with leaves or litter, or sow in a hotbed in early spring. Lettuce plants may also be started very successfully in the house in boxes which are about 5 inches deep. Make soil very fine and firm. Mark off into rows 2 inches apart and $\frac{1}{4}$ inch deep, into which sow the seed quite thinly; cover with blotting or brown paper fitted into the top of the box. First saturate the paper with water and keep moist until the seed germinates, then remove. Expose the young plants gradually to the light. As soon as the ground outside is dry and warm, so that it can be well worked, set out the plants 8 inches apart in the rows. For outside sow very thinly in rows $1\frac{1}{2}$ feet apart, covering seed $\frac{1}{4}$ inch deep with fine soil, and when well up thin to 1 foot apart in the rows. In order to have crisp, tender Lettuce, it should be grown as rapidly as possible, therefore the soil should be made very rich by liberal manuring.

One ounce of seed sows 100 square feet; plants 120 feet of row; produces 3,000 plants.

Johnson's Seeds that Produce

Selected Onion Seed

Sow the seed as early in the spring as the ground can be worked, in drills fourteen inches apart, covering with soil about one-half inch. Begin cultivating as soon as the rows can be seen and keep the ground thoroughly clean, for once onions are choked by weeds they never produce as good or as full a crop. Above all, plant good onion seed.

Johnson's Seeds that Produce

Parsnips

Parsnips are of the easiest culture and require a full season to come to maturity. Seed of the long varieties should be sown early in spring up to May 15. Early Short Round matures quicker and gives a full crop planted as late as June 1. The roots may be left outdoors all winter, or they may be stored in a cool, well-ventilated cellar, packed in boxes filled with slightly moist soil. Grow plenty of parsnips for winter storing. They are very nutritious. One ounce for 360 feet of row. Sown at the rate of 4 to 6 pounds per acre.

Improved American Hollow Crown

This grows longer than the preceding variety, but does not have as broad a shoulder. The roots are long and tapering, requiring a deeply worked soil to develop to perfection. It is a widely known variety, 15 inches long and 3 inches in diameter at the shoulder. Pkt., 10 cts.; oz., 20 cts.; 4 ozs., 40 cts.; ½ lb., 60 cts.; lb., 95 cts.; 2 lbs., \$1.70; 5 lbs., \$4.00, postpaid.

Johnson's Seeds that Produce

Pepper

In the latitude of Cleveland, sow the seed in hotbeds in early March. Thin out or transplant the seedlings when they are 2 inches high, giving them plenty of room to develop sturdy plants. When the weather is settled and the soil warm, transfer them to the open ground, setting them about 2 feet apart in rows 3 feet apart. A rich, mellow, well-drained soil is best. The fruits are used in both the green and ripe stages for making all sorts of pickles. The large-fruited varieties are desirable for stuffing. An ounce of seed will produce about 1,000 plants.

JOHNSON'S EARLIEST MANGO. The flavor is very mild, so that the peppers may be eaten like an apple. In an average season Johnson's Earliest will produce five times as many peppers as any other sweet kind, and they mature much earlier. Pkt., 10 cts.; $\frac{1}{4}$ oz., 35 cts.; $\frac{1}{2}$ oz., 60 cts.; oz., \$1.00; $\frac{1}{4}$ lb., \$2.50.

PUMPKIN

One ounce will plant about 25 hills; 4 pounds will plant an acre.

Grown principally for stock-feeding, yet some are so sweet, juicy, and fine-grained that they will always be considered indispensable for pies and sauces. Culture like Melons, but the soil need not be so rich and the hills should be planted farther apart.

SMALL SWEET (Sugar). This is the small, sweet Pumpkin that has made the New England States famous for their pumpkin pies. The flesh is very fine-grained, most deliciously sweet flavored, and a splendid keeper. It averages about 10 inches in diameter and is of deep orange yellow color. RADISHES

One ounce will sow 100 feet of row; 8 pounds will sow an acre in drills; 12 pounds broadcast.

To be crisp and tender, Radishes must grow quickly; whenever growth is checked by drought or cold weather, they become tough and pithy. Rich, light, sandy soil suits them best. For the forcing crop, sow seeds in hotbeds in rows 5 to 6 inches apart and thin the plants as the ground becomes warm. Seed of winter varieties should be sown in midsummer. Summer varieties are best adapted for general crop.

JOHNSON'S EXTRA SELECT SCARLET GLOBE. (See cut.) This new radish has a remarkable ability to bear the heat necessary for rapid growth without becoming pithy or losing flavor. As shown in the illustration, it is of surpassing beauty as regards shape and color. The flesh is crisp, tender, juicy and mild. The color is a rich scarlet. It has a small top and the roots are surprisingly uniform in shape and size. We offer only the most carefully grown seed. Pkt., 10 cts.; oz., 20 cts.; ¼ lb., 35 cts.; lb., \$1.25, postpaid.

DU PONT SEMESAN

Semesan is the most effective all-purpose seed and plant disinfectant on the market. The use of this remarkable mercuric compound, either in dust or liquid form, not only provides disease control, but accelerates seed germination, invigorates seedling growth, insures sturdier stands and produces larger, more beautiful flowers, foliage and vegetable crops.

Semesan will control such disease organisms as "damping-off" of seedlings, stem rot of carnations and root rot of violets, which are borne in the greenhouse, coldframe and seed bed soils. When choice tubers or bulbs have been cut accidentally or in separation, Semesan will protect them from storage molds or rots. It is being increasingly used for the disinfection of cuttings, graftings, tools and general equipment used in agricultural operations. Descriptive booklets upon request. Prices: 2 ozs., 60 cts.; 1 lb., \$2.75; 5 lbs., \$13.00, postage extra.

Spinach

One ounce will sow 100 feet of row; 15 pounds will sow an acre in rows, 25 pounds if broadcast.

JOHNSON'S NORBEK. This new variety is the top notch of the spinach family, being a decided improvement on all other kinds. The leaves are broad, heavy and of a dark green, glossy color, much more heavily blistered than Long Season; it will also stand at least a week or ten days longer without shooting to seed, which is an important factor. The plant is not of the rosette type, but stands more erect, and requires a less number of plants to fill a basket than any other variety. Aster California Giant

New California Giant Branching Asters

We have had this strain under observation for the past few years, and it now fully meets with our ideas as to quality. It is a splendid mid-season to late flowering strain, the result of years of painstaking selection by one of California's leading hybridizers. The plants grow from 3 to 3½ feet high with long, strong stems 18 to 24 inches in length, bearing beautifully formed, curled and interlaced flowers 5 inches and over across. The illustration shown on this page was made from a photograph taken on August 20th. We offer the following beautiful colors:

Lavender Blue. Pure White.
Peach Blossom. Purple Violet.

Rich Rose.

Price, any of the above, 25 cts. per pkt.

Collection containing a packet each of the above 5 colors, \$1.00.
Finest Mixed. Containing all colors, 20 cts. per pkt.: 3 pkts. for 50 cts.

New Early Beauty Aster

This new strain of the popular Beauty Aster is as early as Crego, and thus has a distinct advantage over the original Beauty Aster, which was too late for many locations. The blooms are magnificent in size, and the long stems are very useful. It is a wonder for continuous blooming. We offer the following most effective colors:

One packet each 5 colors for \$1.00.

Four Fine Asters

HEART OF FRANCE. The best pure red Aster ever introduced. Heart of France opens red as a ruby, deepens with age and retains its remarkable beauty to the very end. The petals appear strikingly changeable, showing a glow and sheen quite unique. The flowers are large and full with no trace of a hollow center; the plants are of branching type and very robust; stems long and strong. Pkt., 25 cts.; ¼ oz., 60 cts.; ½ oz., \$1.00.

VIOLET KING. The habit is similar to the popular Giant Branching, vigorous growth, long stiff stems. In form the flower is entirely distinct from any other variety; petals somewhat resemble the quilled varieties, but are much larger and broader. In shape and size the bloom is round, full and very large. Pkt., 25 cts.; ¼ oz., 60 cts.; ½ oz., \$1.00.

NEW WHITE PERFECTION. A distinct race of upright asters. Flower of branching type, snow white, stems long, plant very robust. The full double form of the flower makes a very shy production of seed, hence the following high prices. Pkt., 25 cts.; ¼ oz., 50 cts.; ½ oz., 80 cts.

PINK ENCHANTRESS. Flowers soft delicate pink; always full double, petals of medium length and very broad. Plant upright in habit; stems long, strong and graceful. Mid-season. Pkt., 25 cts.; ¼ oz., 50 cts.; ½ oz., 85 cts.

New Scabiosa—Peach Blossom

New "Royal Bouquet" Verbena

Wonderful as the Verbena is as a decorative plant for summer bedding, its usefulness has always been limited by its carpet-like spreading habit, and gardeners have long desired to have the plant in a compact and upright growing form. This new variety forms a plant 15 to 18 inches high and not more than 10 inches across, no lateral branches being thrown out, and what gives this novelty its special value is the fact that the flowers will compare in size and variety of color with those of the finest strains of Auricula-eyed Verbena. Suitable for growing in pots. **Mixed Colors. In packets only, 25 cts.**

ZINNIAS

Double Giant Dahlia-flowered

We are pleased to be able to offer this Zinnia in separate colors this year. The plants are of the same vigorous habit as our Giant Double-flowering varieties. We consider them a fitting companion to our strain of Giant Double-flowering Zinnias.

We offer 11 of the most wanted colors, separately, as well as a splendid mixture of many colors, as below:

EXQUISITE. Truly Dahlia-flowered as regards form and size. Color light rose with center a deep rose.

CRIMSON MONARCH. The largest and best of red shades.

SCARLET FLAME. A large, beautiful, bright scarlet, with a delightful blending of orange throughout the petal.

METEOR. A rich, glowing deep red and the darkest of all the red shades. Fine form, with good depth of petal.

ORIOLE. We consider this the most beautiful of its class. It is an immense orange and gold bicolor, changing slightly as it ages.

DREAM. A fine, deep lavender, turning to Mallow purple, a new desirable shade in Zinnias.

BUTTERCUP. An immense deep creamy yellow. A very desirable flower which should be included in every collection.

CANARY BIRD. A delicate shade of primrose—very large and holds its color well until out of bloom.

SPECIAL MIXTURE. A well blended mixture containing the above novelties.

JOHNSON'S SELECT ASTERS

Cultural Hints

For early flowering the seed should be started in the house, hot-bed or cold-frame in April, transferring them to their flowering quarters as soon as danger from frost is past. For August and later flowering it is just as well to sow them in the open in May, preferably in a prepared seed bed, transplanting them when two or three inches high to where they are to bloom although they may be sown where they are to flower with equally as good results.

We make a great specialty of this popular flower, securing our stocks from the most skillful growers only, and we confidently recommend them. Aster plants are ready in June.

SWEET PEAS

Hawlmarm Pink Sweet Peas

It has been only a few years since the first of the Spencer Sweet Peas was introduced to American gardeners, but they have in that short time so completely overshadowed the old-fashioned or grandiflora varieties that the latter are almost forgotten. The flowers of the Spencer or orchid-flowered type are of extraordinary size, with beautifully waved standards and widespreading wings, round and open, often measuring 2 inches or more across. A large percentage bear four of these immense blossoms to the stem, and the stems are long and strong, making them of exceptional value for cutting.

In exquisite form and range of elegant colors there are no flowers to compare with Sweet Peas. We offer the cream of the Spencer sorts that have been tested and found to be of true merit and distinct in color.

ROSES—The Best Field-Grown Roses for Your Garden

We offer a very select list of Dormant Rose Bushes for outdoor planting in Hybrid Tea, Hybrid Perpetual and Hardy Climbing types. The following varieties, each listed in its class, we can especially recommend for either spring or fall planting.

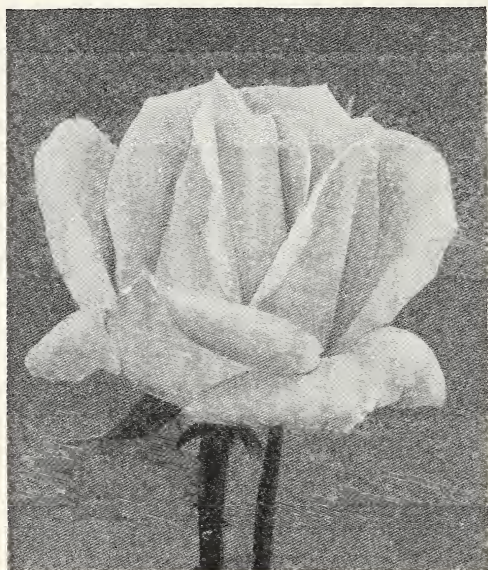

Cultural Directions

When the rose beds are prepared, be sure they have good drainage, and that the soil is rich and sweet. Water well after planting. Prune them well; if you do not know how, ask us; we will be glad to tell you the right way. Keep them clean from insects. Bush roses can be set 1½ feet apart, climbing varieties from 4 to 6 feet apart, and standard Roses 3 or more feet apart. Cultivate freely throughout the summer and apply a light top dressing of bone-meal or sheep manure at least once a month throughout the growing season. Just before the ground freezes, in late November, draw the soil up against the plant in the same manner as you would hill up potatoes, and in December, when the ground is thoroughly frozen, cover with leaves or straw.

We offer good healthy 2-year-old stock, which will give an abundance of bloom the following summer if planted in the fall.

Prices: each, 75 cts.; 6 for \$5.00; per doz., \$8.00; 25 for \$15.00; 100 for \$52.00, except where noted.

Granulated Imported Peat

Used for Top Dressing on Lawns and for Mulching Bulbs, Shrubs and Roses

Granulated Peat Moss is used with good results in flower and vegetable beds, around bush fruits, vines, shrubs, hedges and under fruit and ornamental trees. Peat Moss stimulates the development of roots of all plants, which results in a quickened growth, because of the improved water and air supply. Highly recommended for top dressing on lawns as its use guarantees a soil that is light and friable, has good drainage and will not crust or bake after watering. Established lawns should be covered 1/2 inch deep with Granulated Peat Moss in the late fall. It will almost disappear by spring. If the fall covering has been omitted, cover lightly in the spring and occasionally during the growing season. It soon works in about the grass roots. Large bale, about 190 lbs. (covers 240 square feet 1 inch deep), \$5.00.

Du Bay Semesan

The Premier Seed Disinfectants

Control Diseases, Increase Yields, Improve Quality

SEMESAN. This modern disinfectant can be applied in either the liquid or convenient dust form to prevent or control effectively a most diversified variety of parasitic diseases and fungoid growths borne by seeds, seed-pieces, plants, grafts and soils. Semesan is harmless to seed and plant life but extremely poisonous to disease and fungous organisms. It generally also hastens germination, produces sturdier plants, promotes earlier maturity and increases both the quantity and quality of crop yields. 2 ozs., 50 cts.; 8 ozs., \$1.60; 1 lb., \$2.75; 5 lbs., \$13.00; 25 lbs., \$56.25; 100 lbs., \$220.00.
